AI Alignment and Explainable AI

- ensuring AI behaves *according to human values*
- declarative top-down approach faces problems
 - reward hacking, hallucinations, sycophancy...
- continuous oversight** of AI behavior is necessary

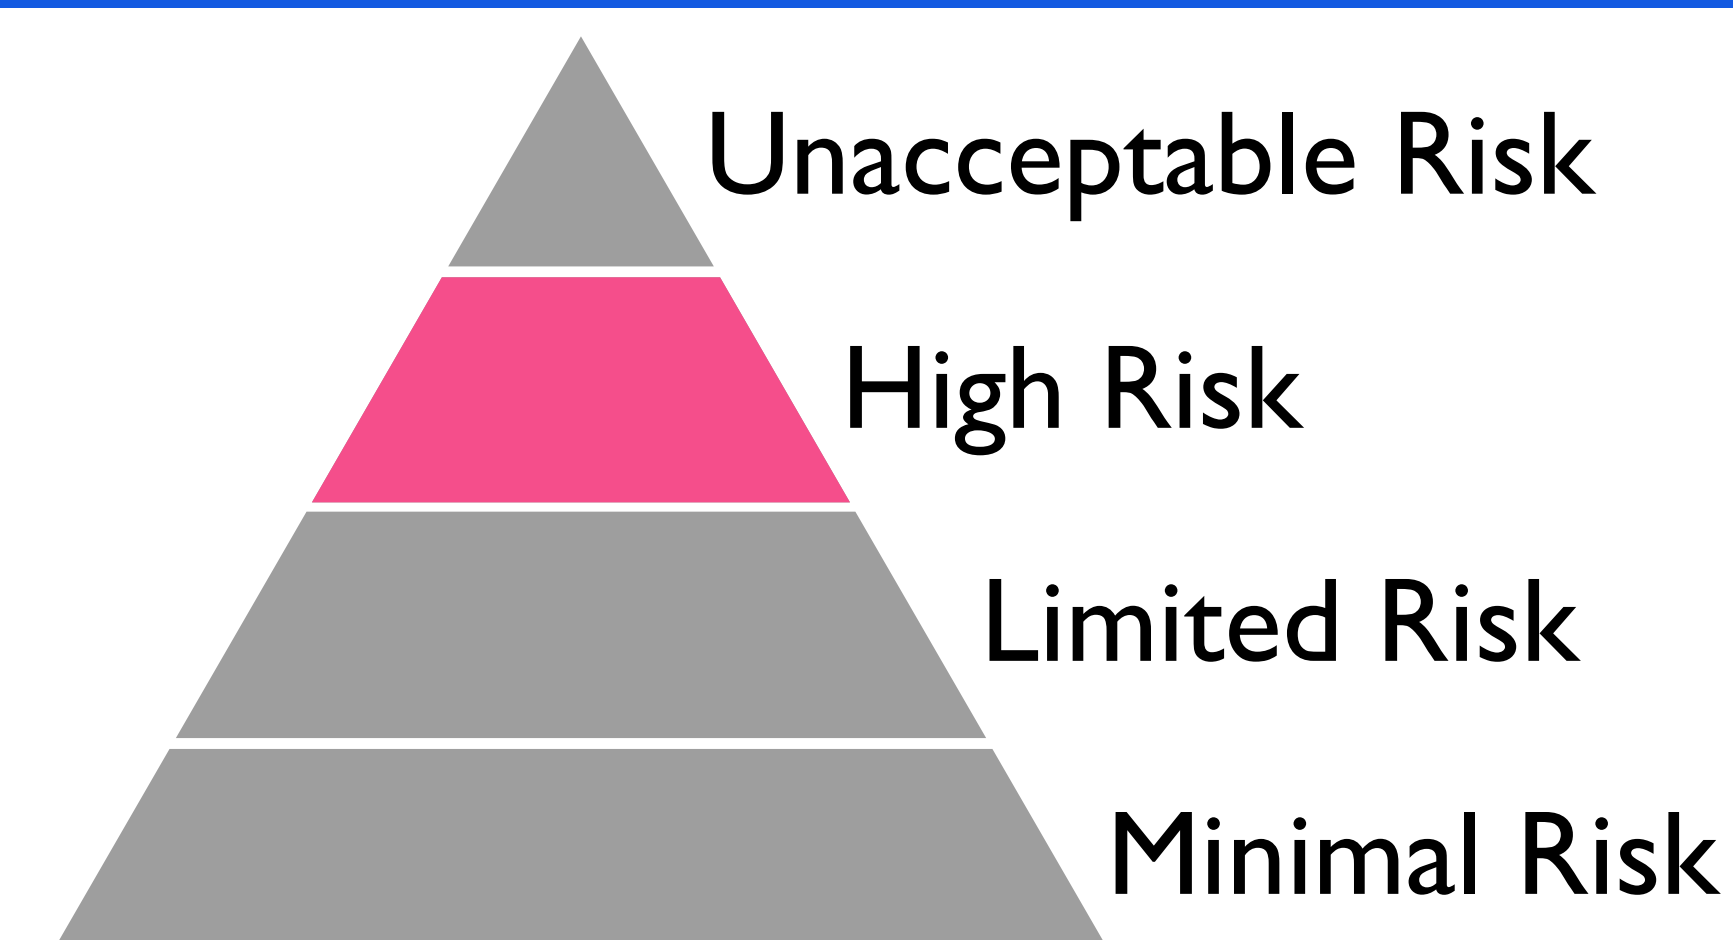

Strengths enables continuous oversight	Weaknesses hard to achieve for SOTA models
Opportunities democratization of AI governance	Threats current evaluation is unreliable

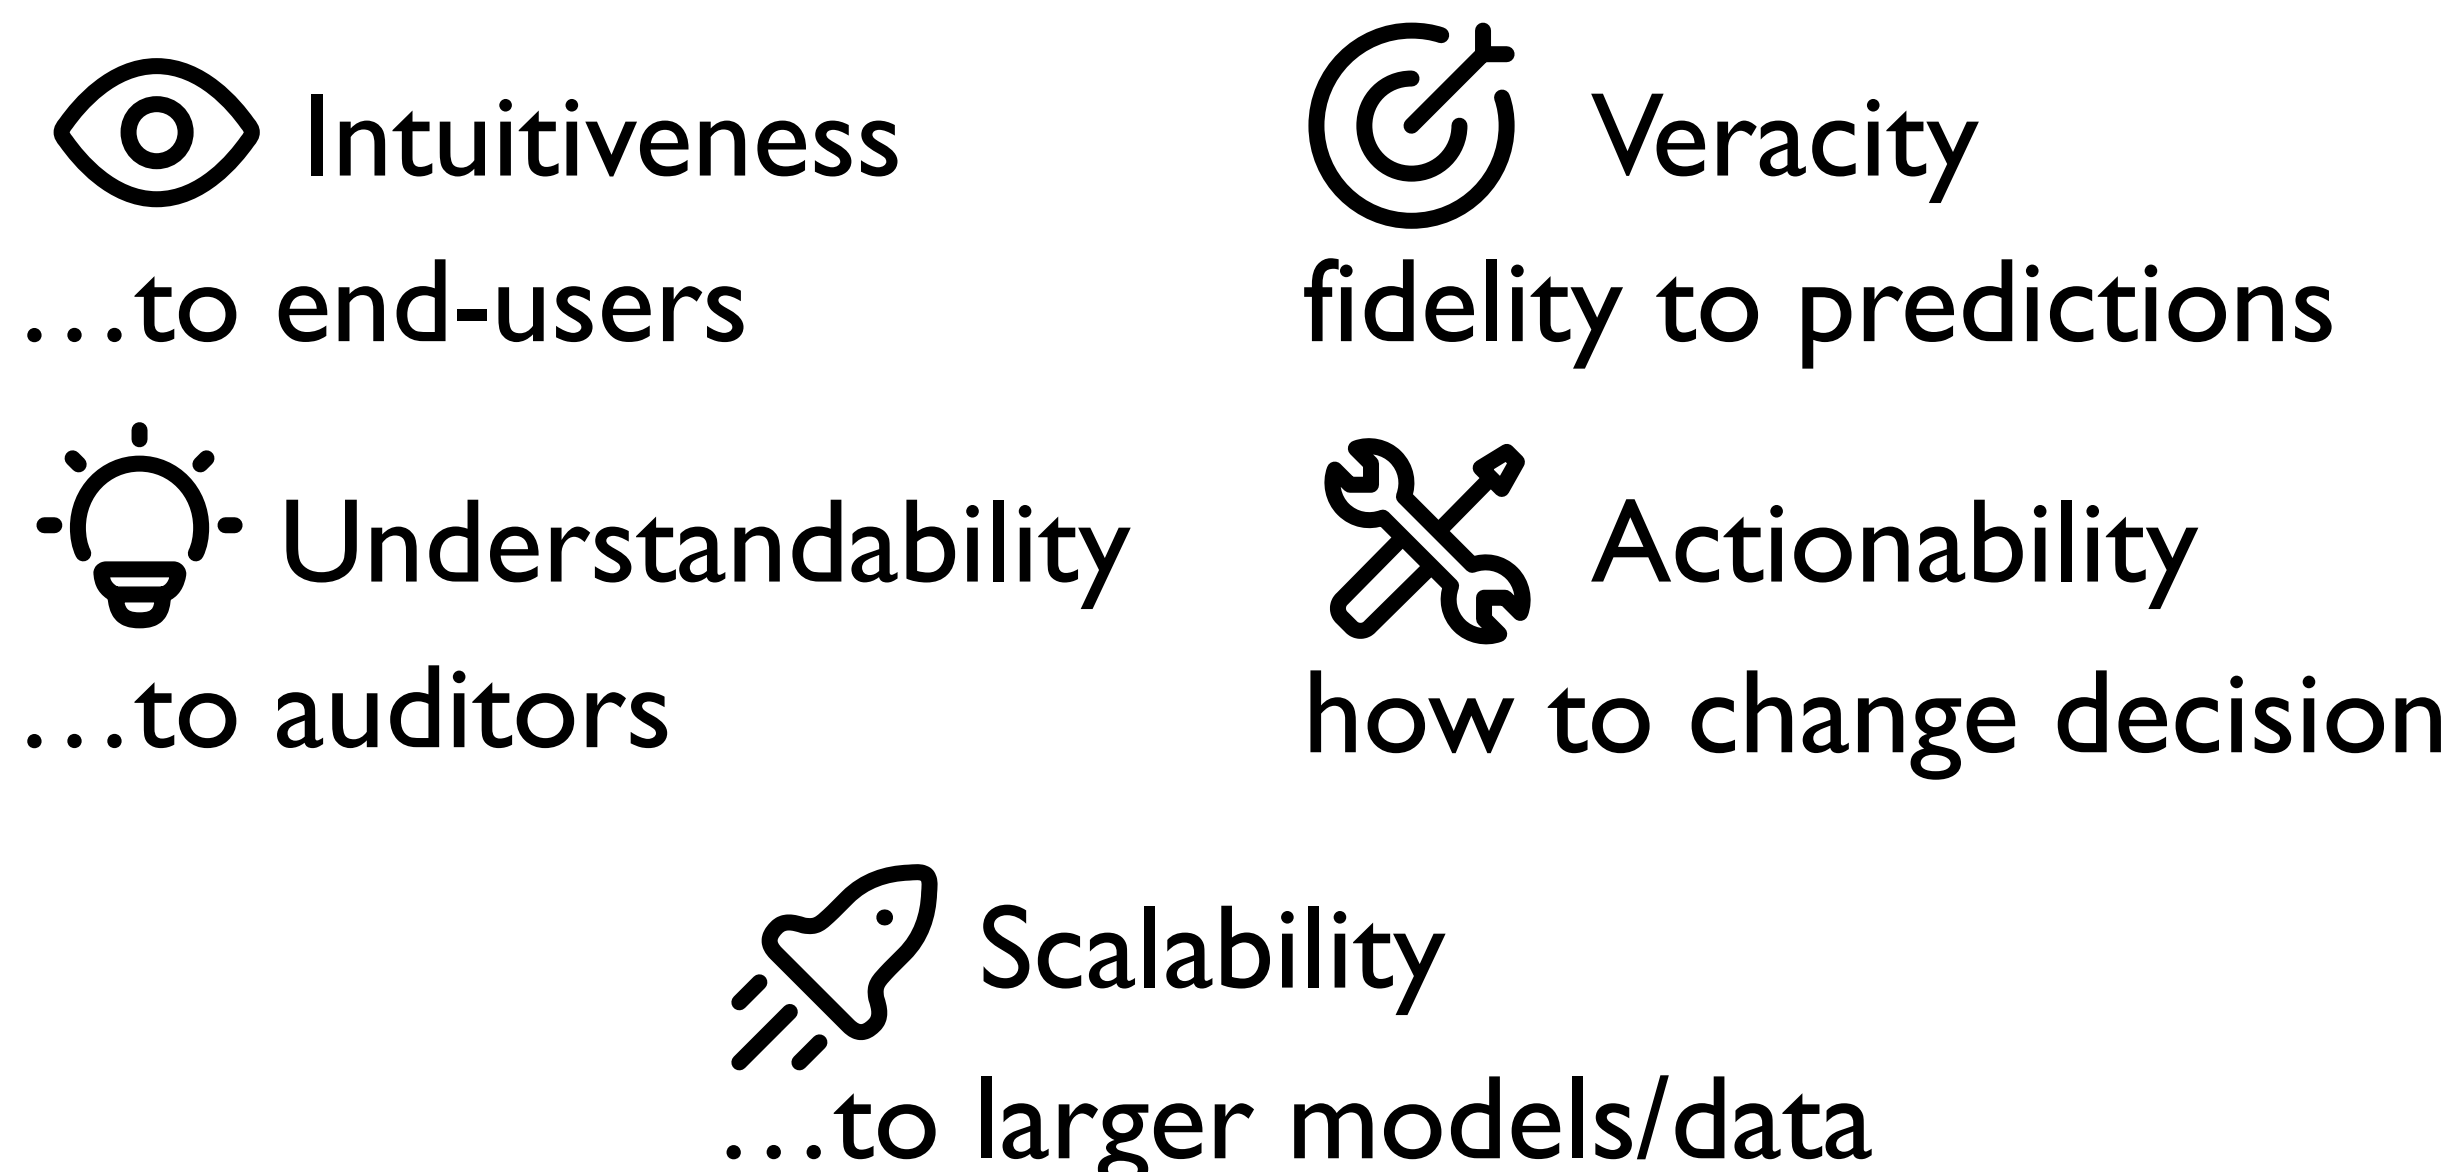

- a proper AI oversight enabled only by explainability
- plethora of XAI methods, but which are reliable?
- evaluation needed: from correctness to user experience

Explainable AI and Regulation

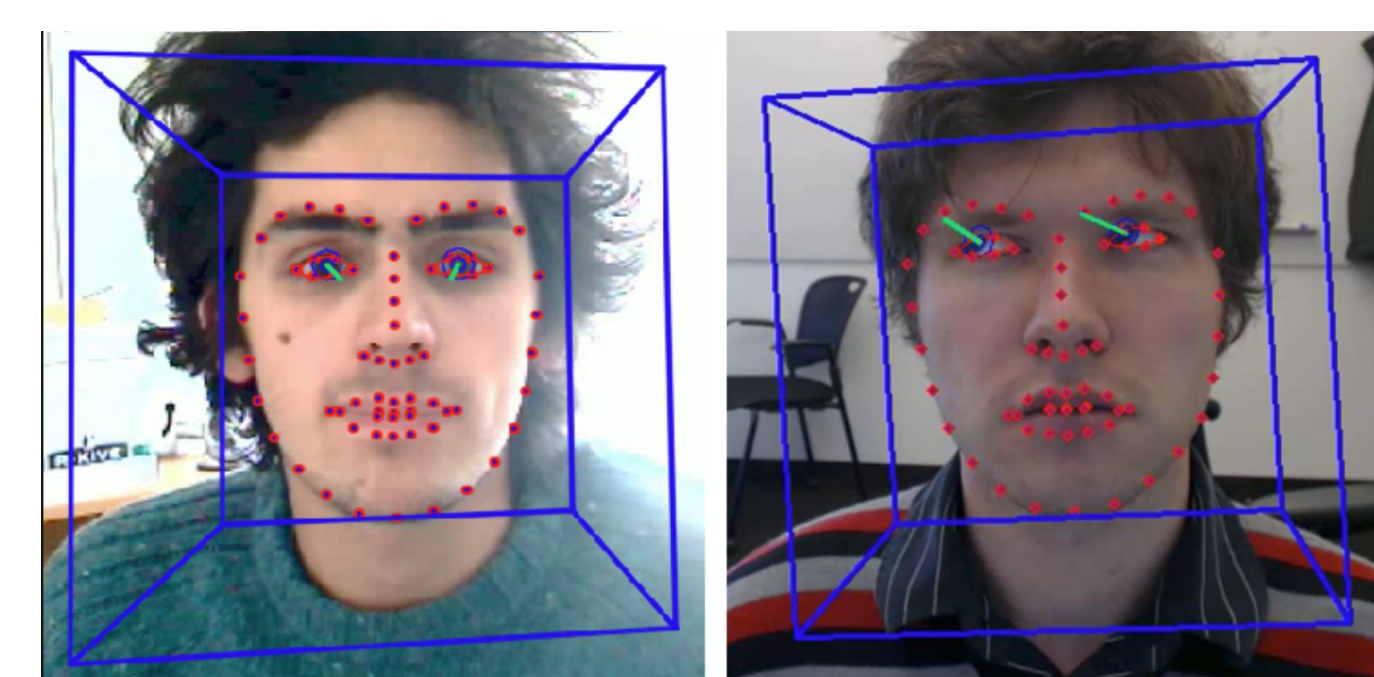

- AI Act** in force since Aug 2024, gradually rolling out
- right to explanation if AI decision has adverse impact on:
 - health, safety, or fundamental rights → **high-risk category**
- objective evaluation/selection of XAI techniques is crucial

Evaluation Dimensions for Explanations

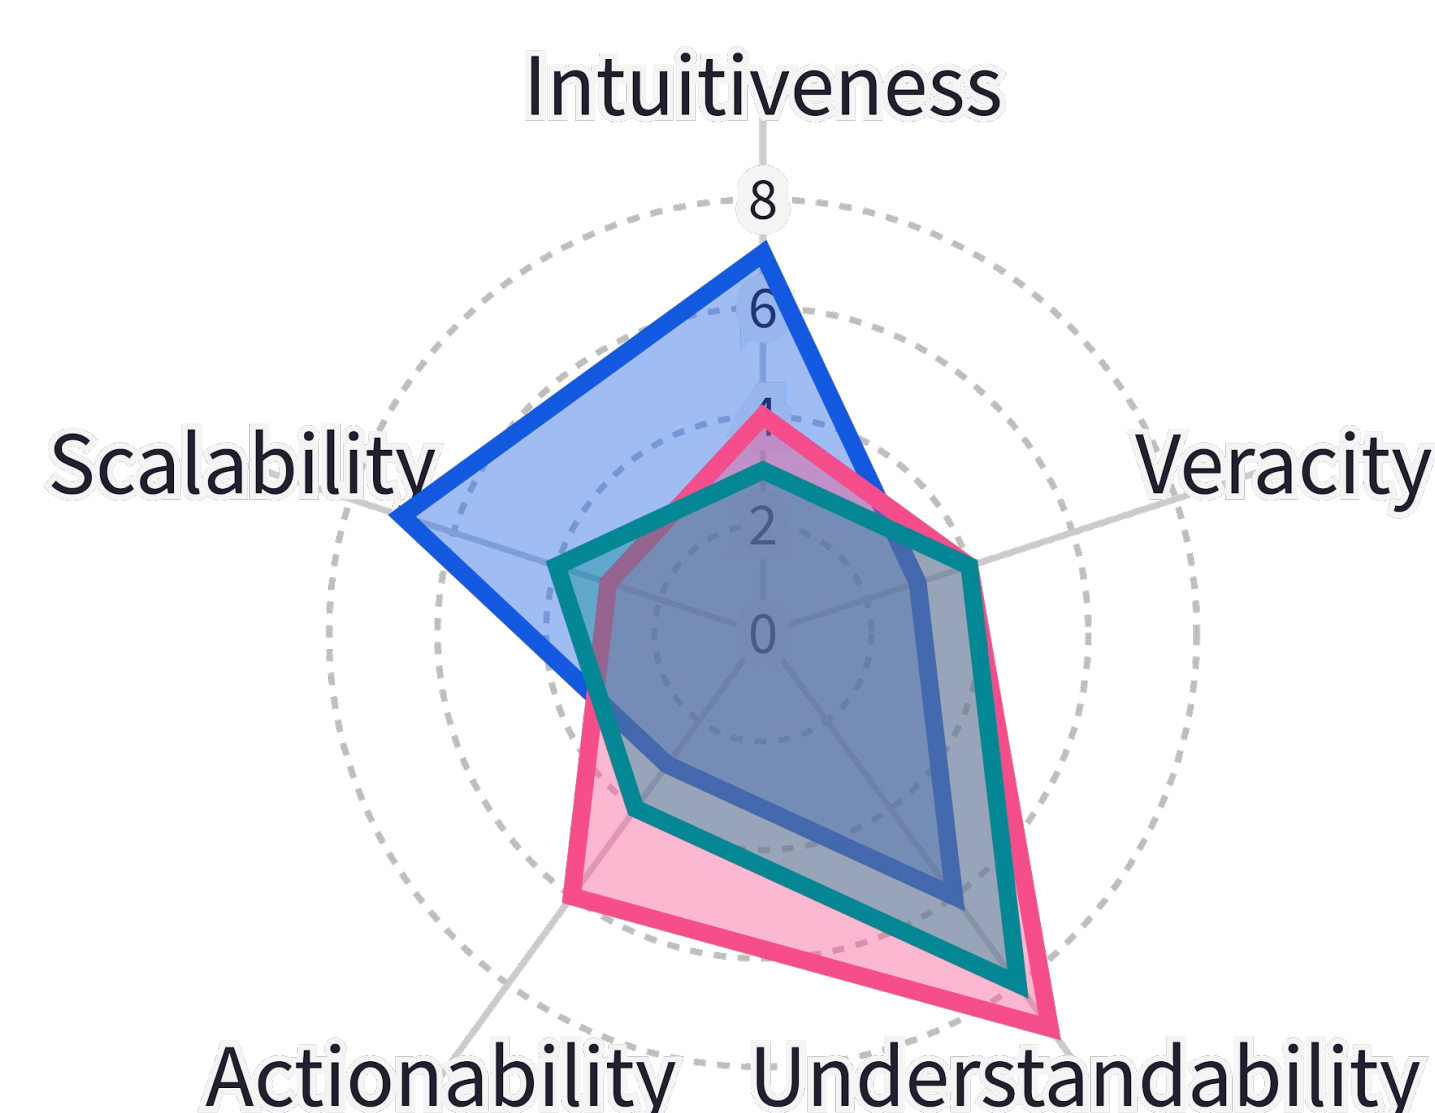

Case Study: Student Proctoring

T. Baltrusaitis, A. Zadeh, Y. C. Lim and L. -P. Morency, "OpenFace 2.0: Facial Behavior Analysis Toolkit," 2018 13th IEEE International Conference on Automatic Face & Gesture Recognition
